## **Generic Name & Medical Uses**

Tramadol (Ultram) belongs to a class of medications known as **opioid analgesics**, which act by altering how your brain and nervous system respond to pain. It is primarily prescribed for:

- **Chronic musculoskeletal pain**
- **Postoperative pain management**
- **Neuropathic pain relief**
- **Acute injury-related discomfort**

When used under medical supervision, Tramadol offers dependable relief without compromising daily alertness or cognitive balance.

---

## Safe Usage and Dosage Information

Always take **Tramadol** as directed by your licensed healthcare provider. The standard dosage typically ranges between **50mg to 100mg**, depending on the severity of pain and the patient's medical history. Avoid combining it with alcohol or other sedatives to prevent adverse interactions.

Store Tramadol in a cool, dry place away from moisture and sunlight. If you experience dizziness, nausea, or fatigue, consult your physician immediately for adjustment guidance.
