What is Dilaudid (Hydromorphone)?

Dilaudid is the brand name for hydromorphone, a widely trusted and highly effective opioid analgesic prescribed to relieve moderate-to-severe pain when other options have failed or aren't suitable. Hydromorphone works by directly blocking pain signals in the central nervous system, providing rapid and lasting relief, especially for those suffering from acute or chronic conditions.

Dilaudid's Uses and Benefits

- The primary use of Dilaudid is managing severe pain that is not responsive to non-opioid medications or weaker opioids.
- Its potent effect is ideal for cases such as post-surgical pain, cancer pain management, and certain injury-related pain.
- Dilaudid is sometimes used for off-label treatment of refractory cough under specialist supervision.
- Dosage varies with needs, with both immediate-release tablets (2mg, 4mg, 8mg) and extended-release forms available.
